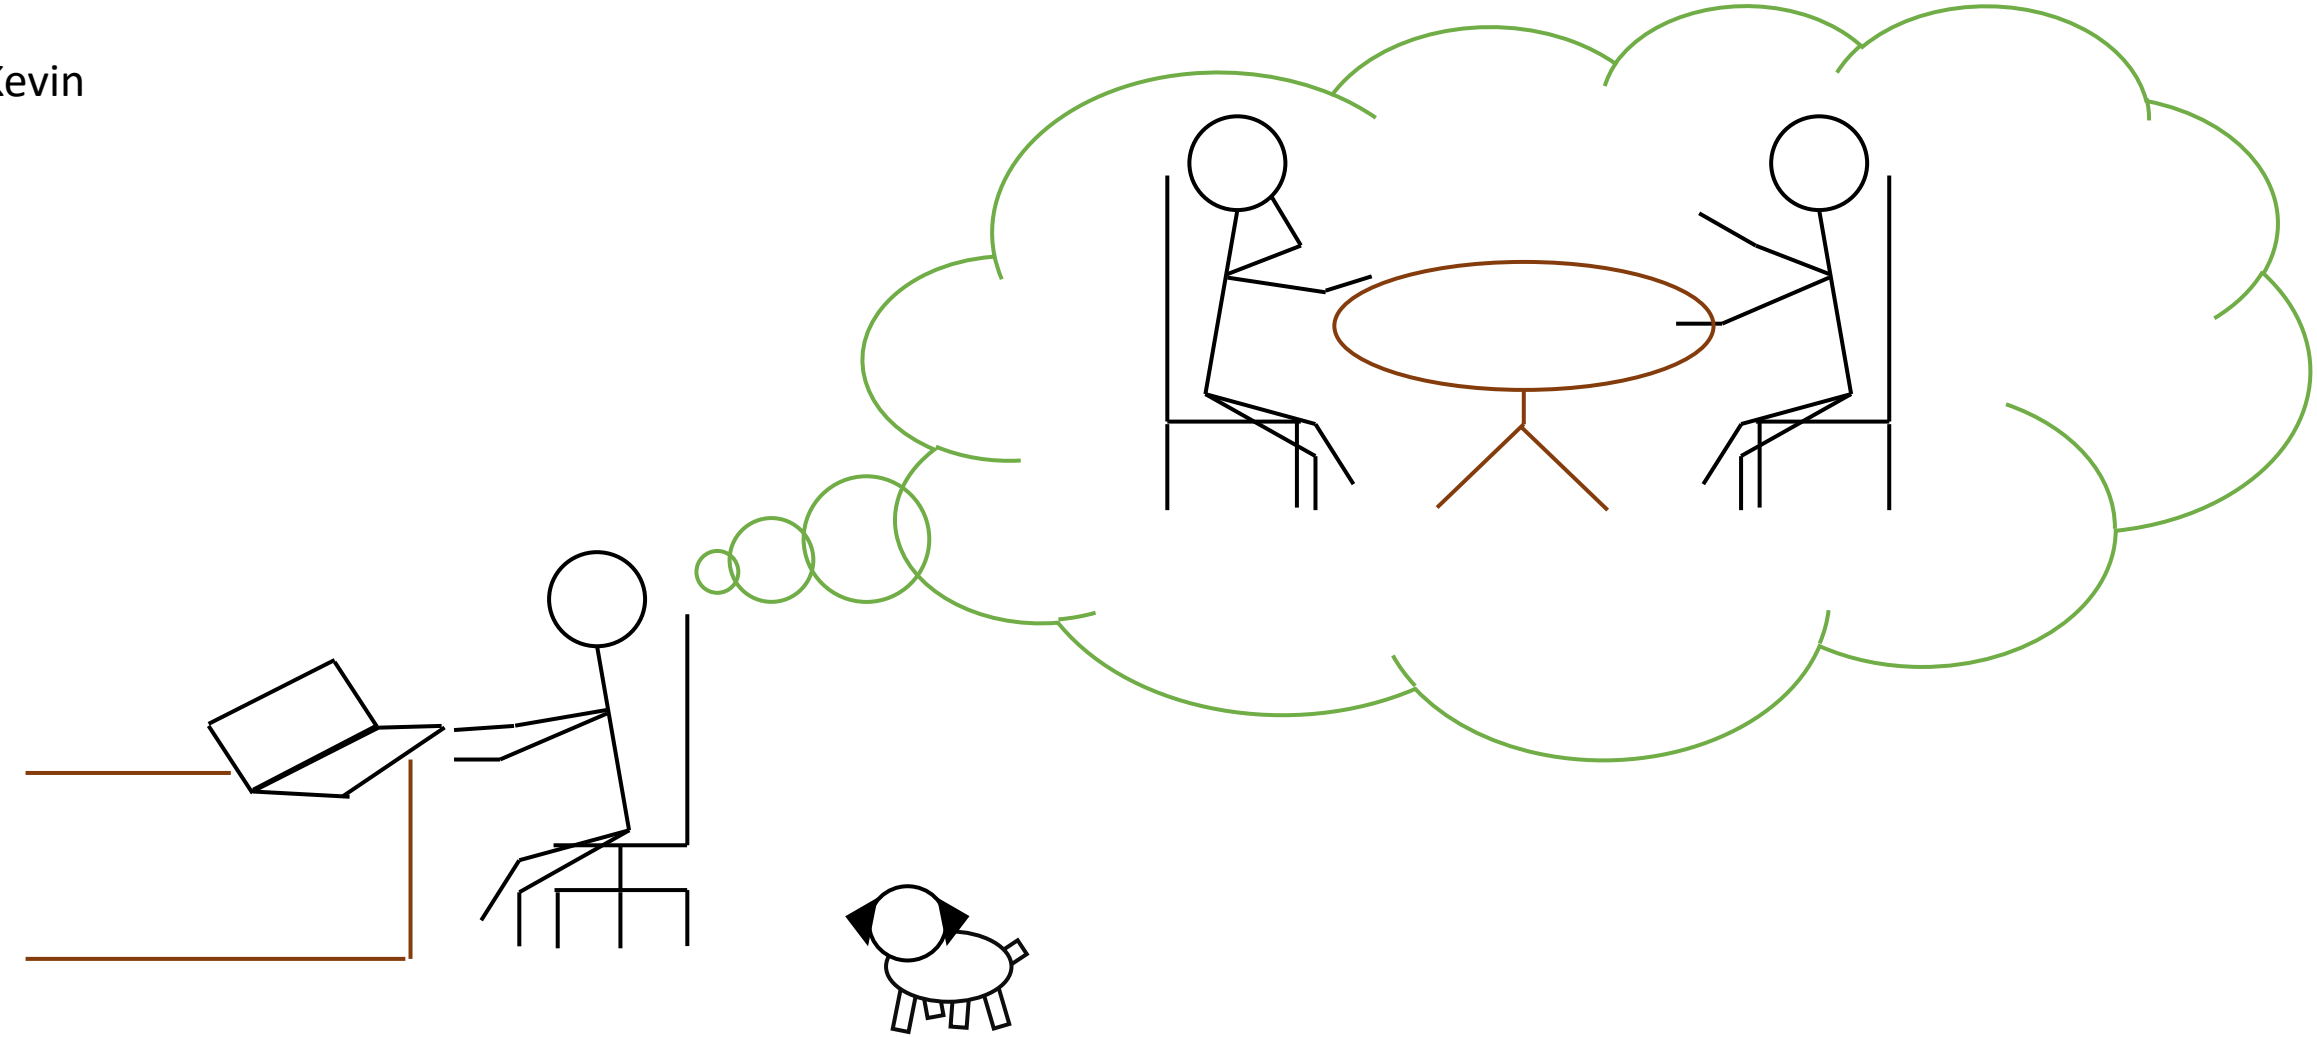
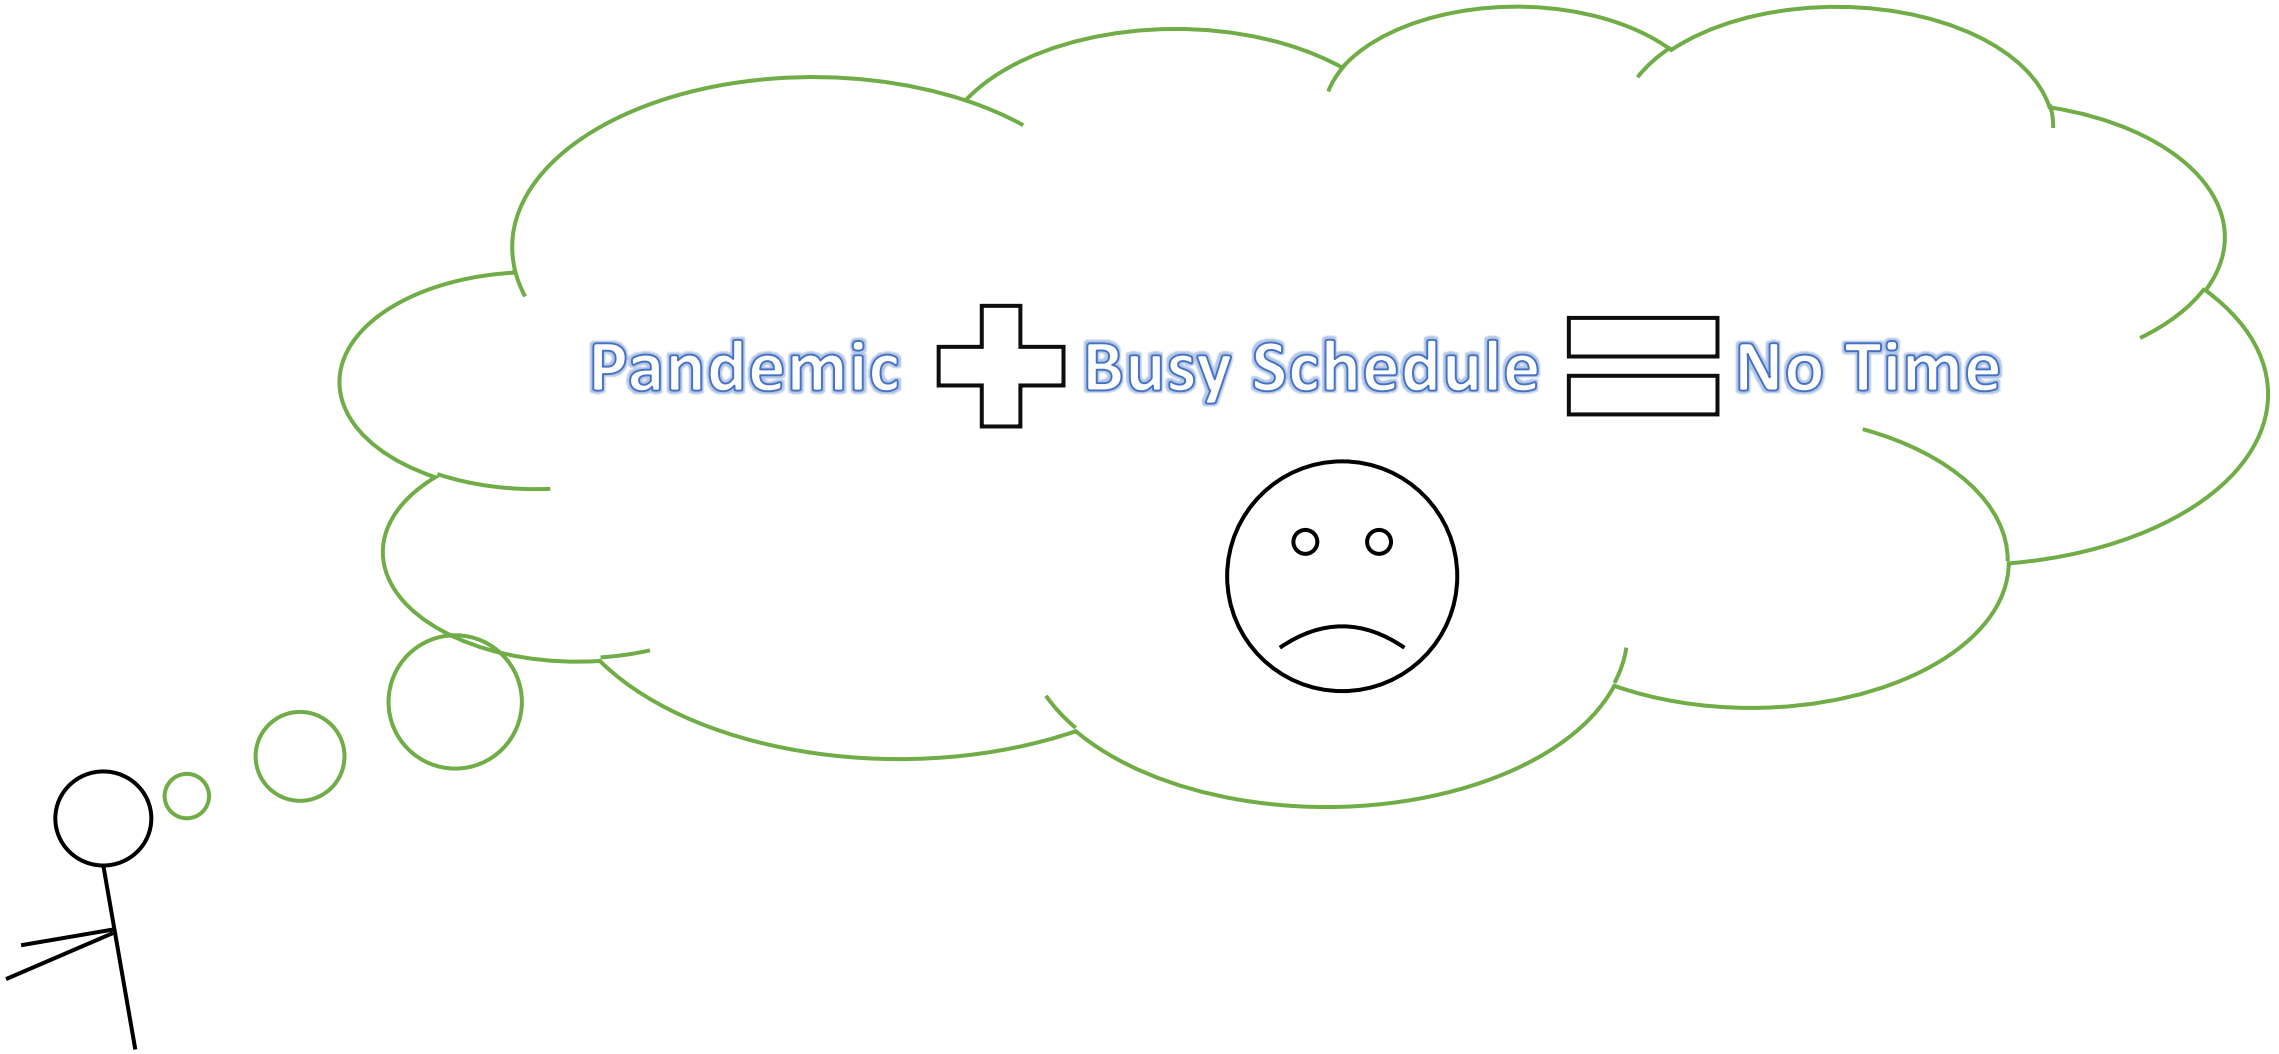
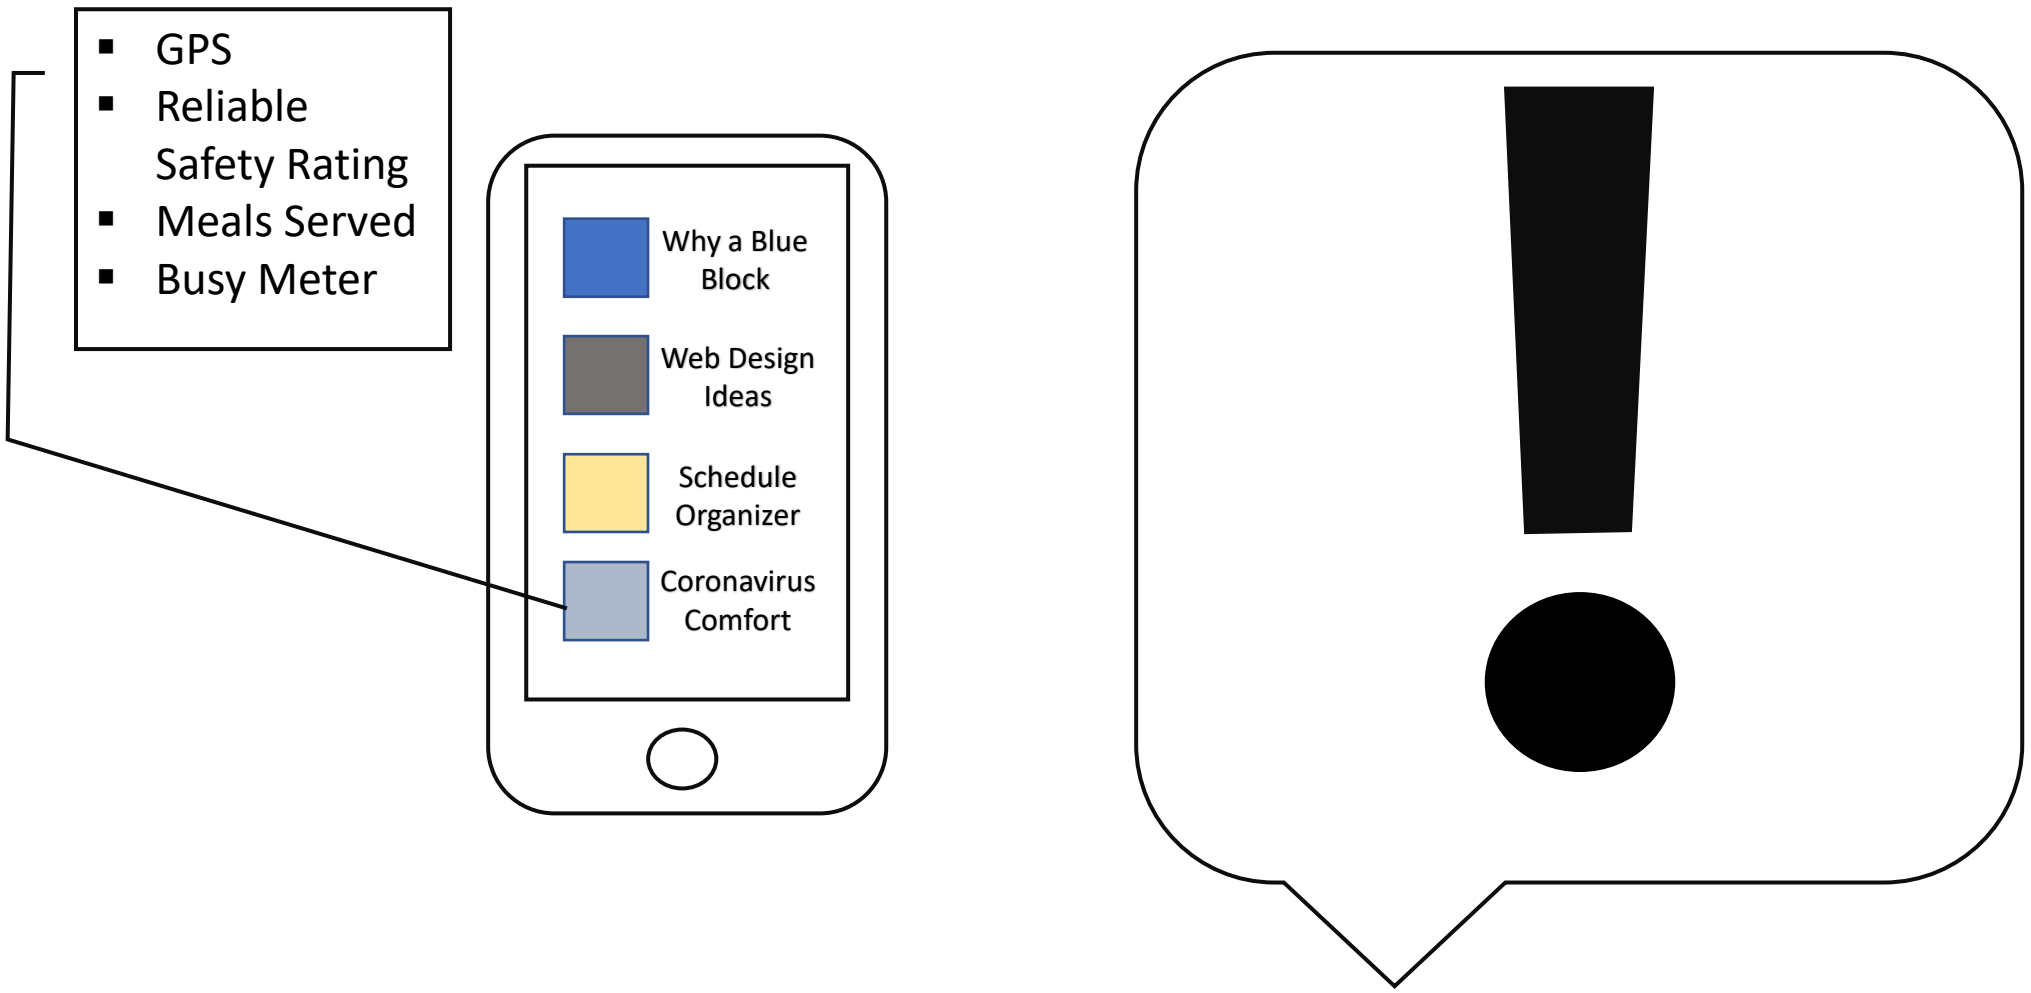
Kevin



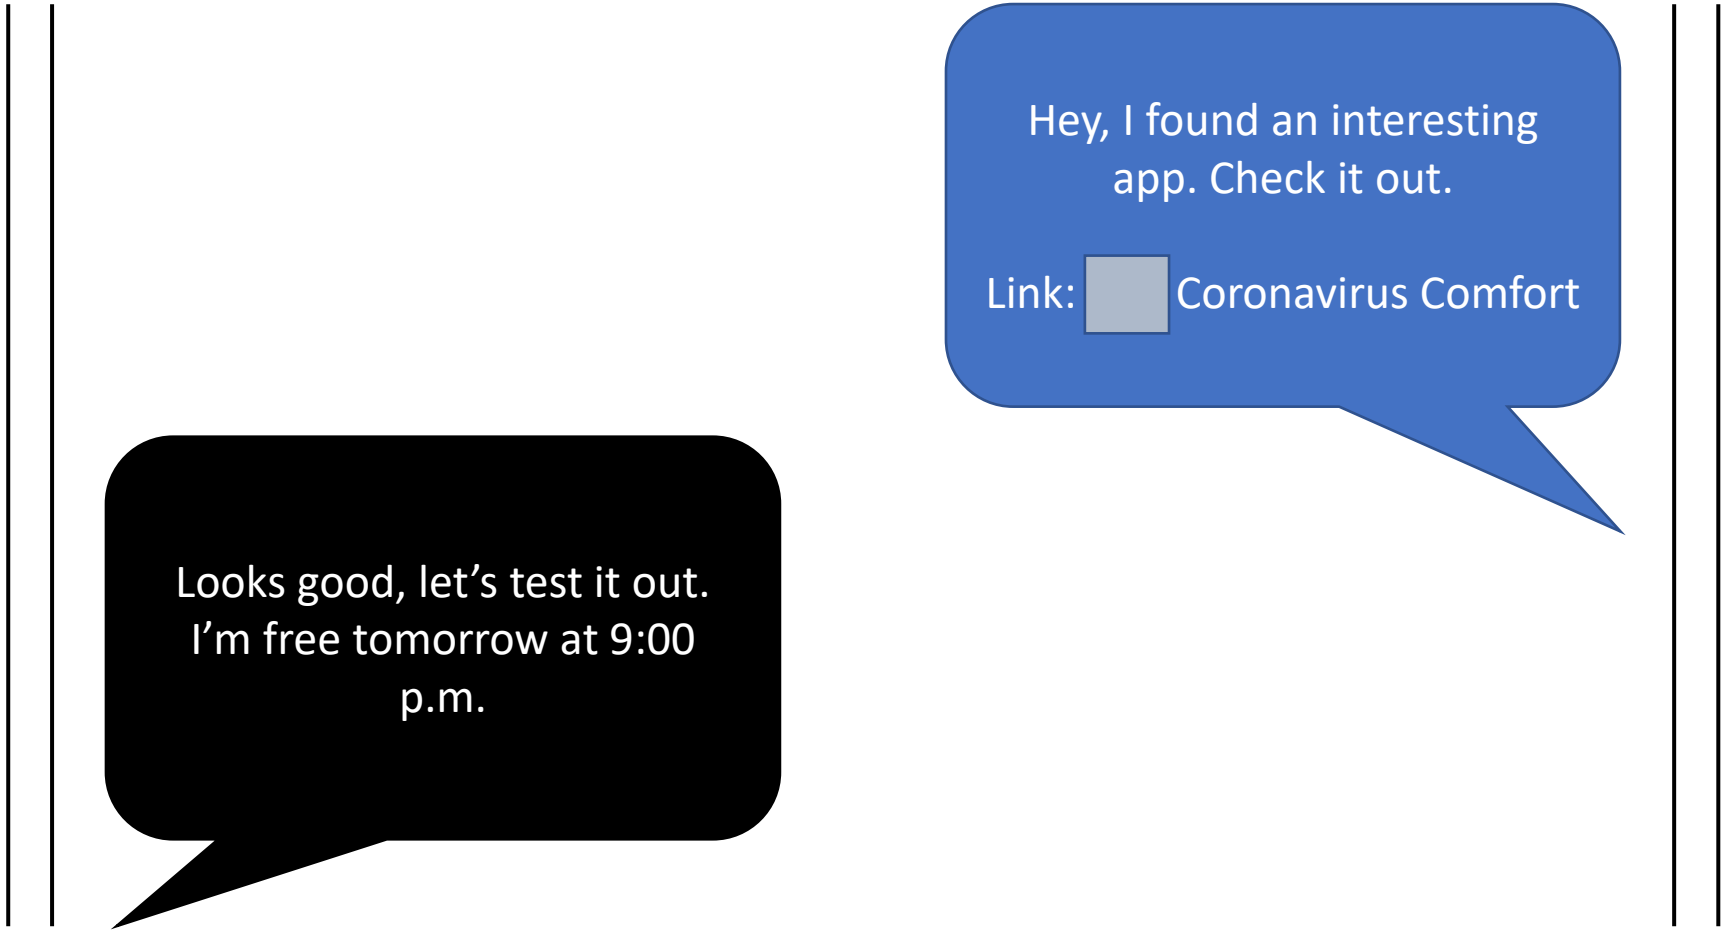
Jackson wants to grab a meal with some of his clients to build a stronger connection and converse with his fellow web developers about their projects.



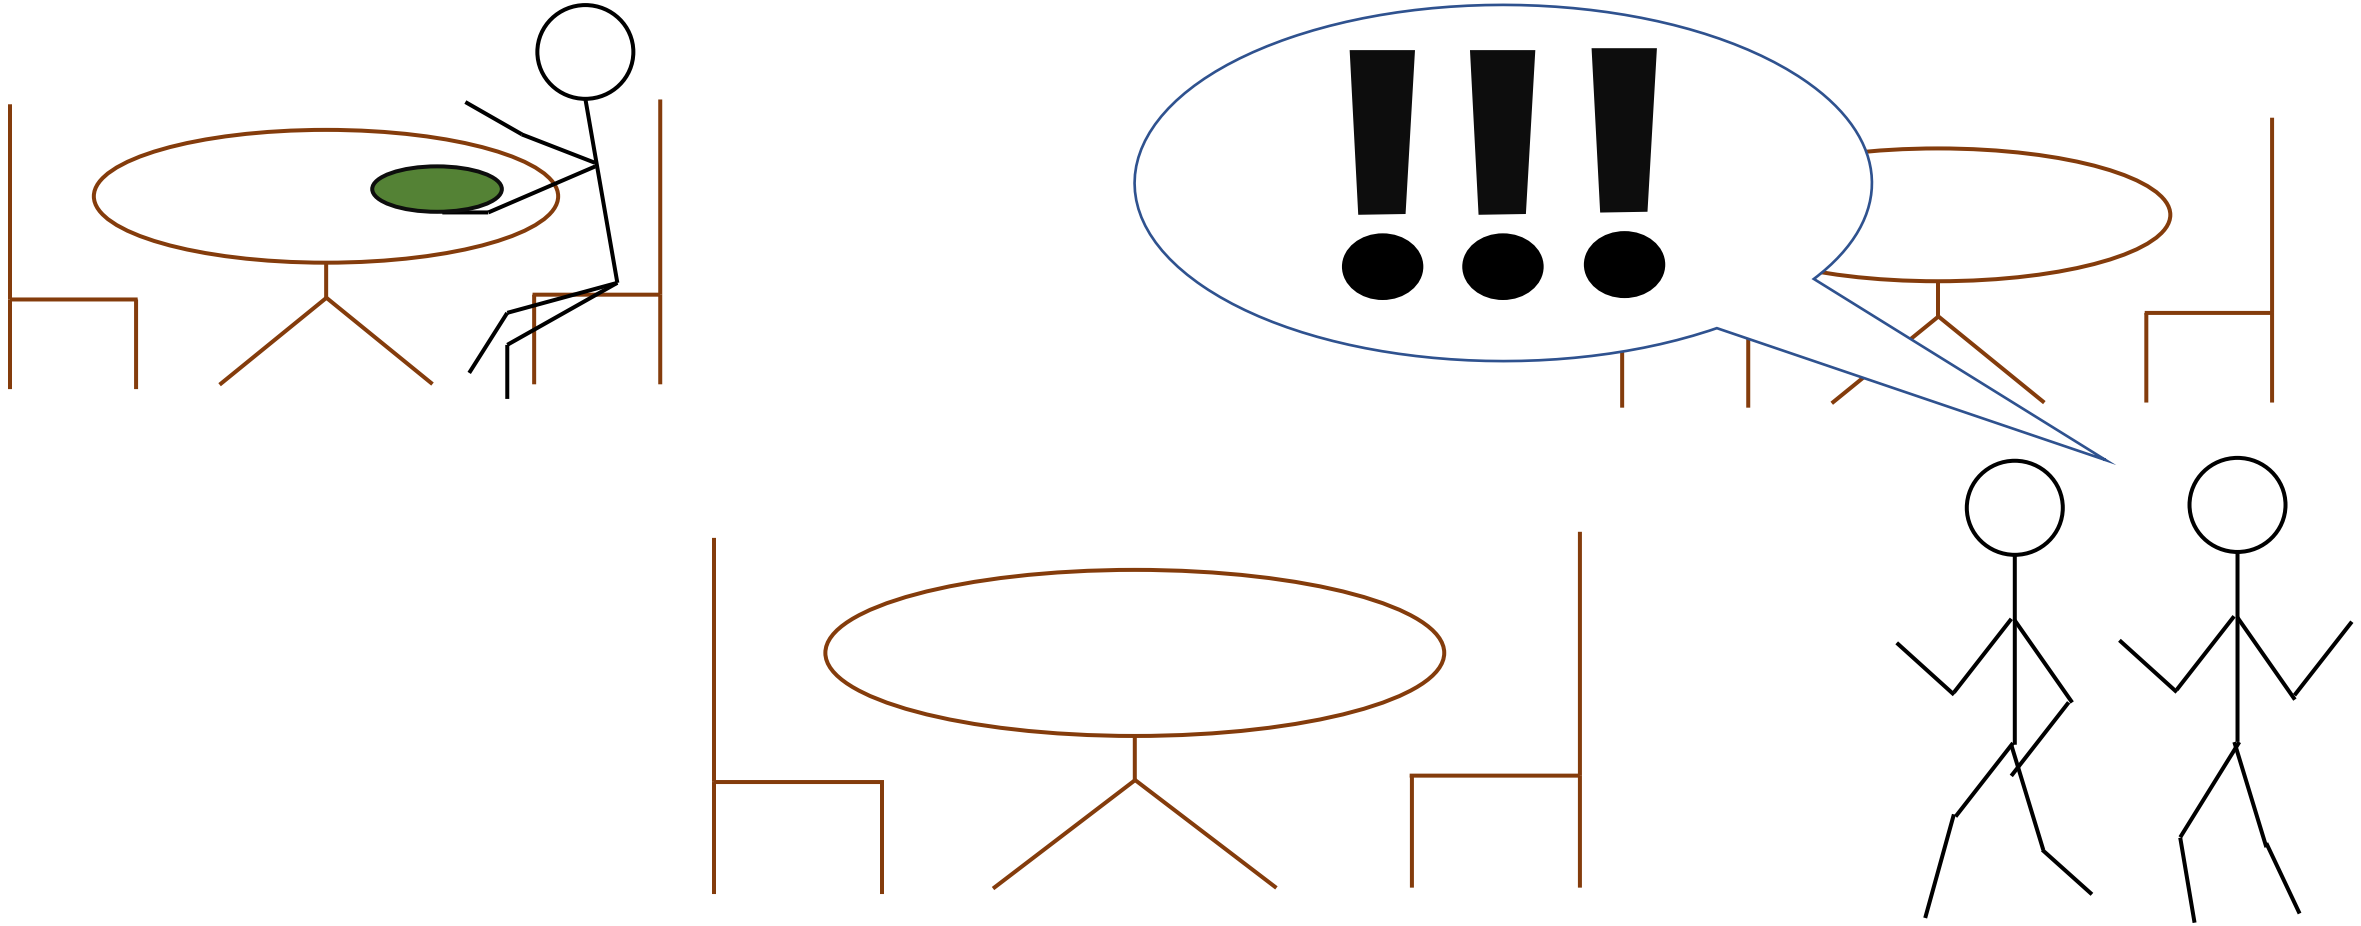
Unfortunately, due to his busy lifestyle and the pandemic, he struggles with finding an appropriate time for him to meet with his clients or other web developers. He is also slightly worried about the potential risk involved with dining out.



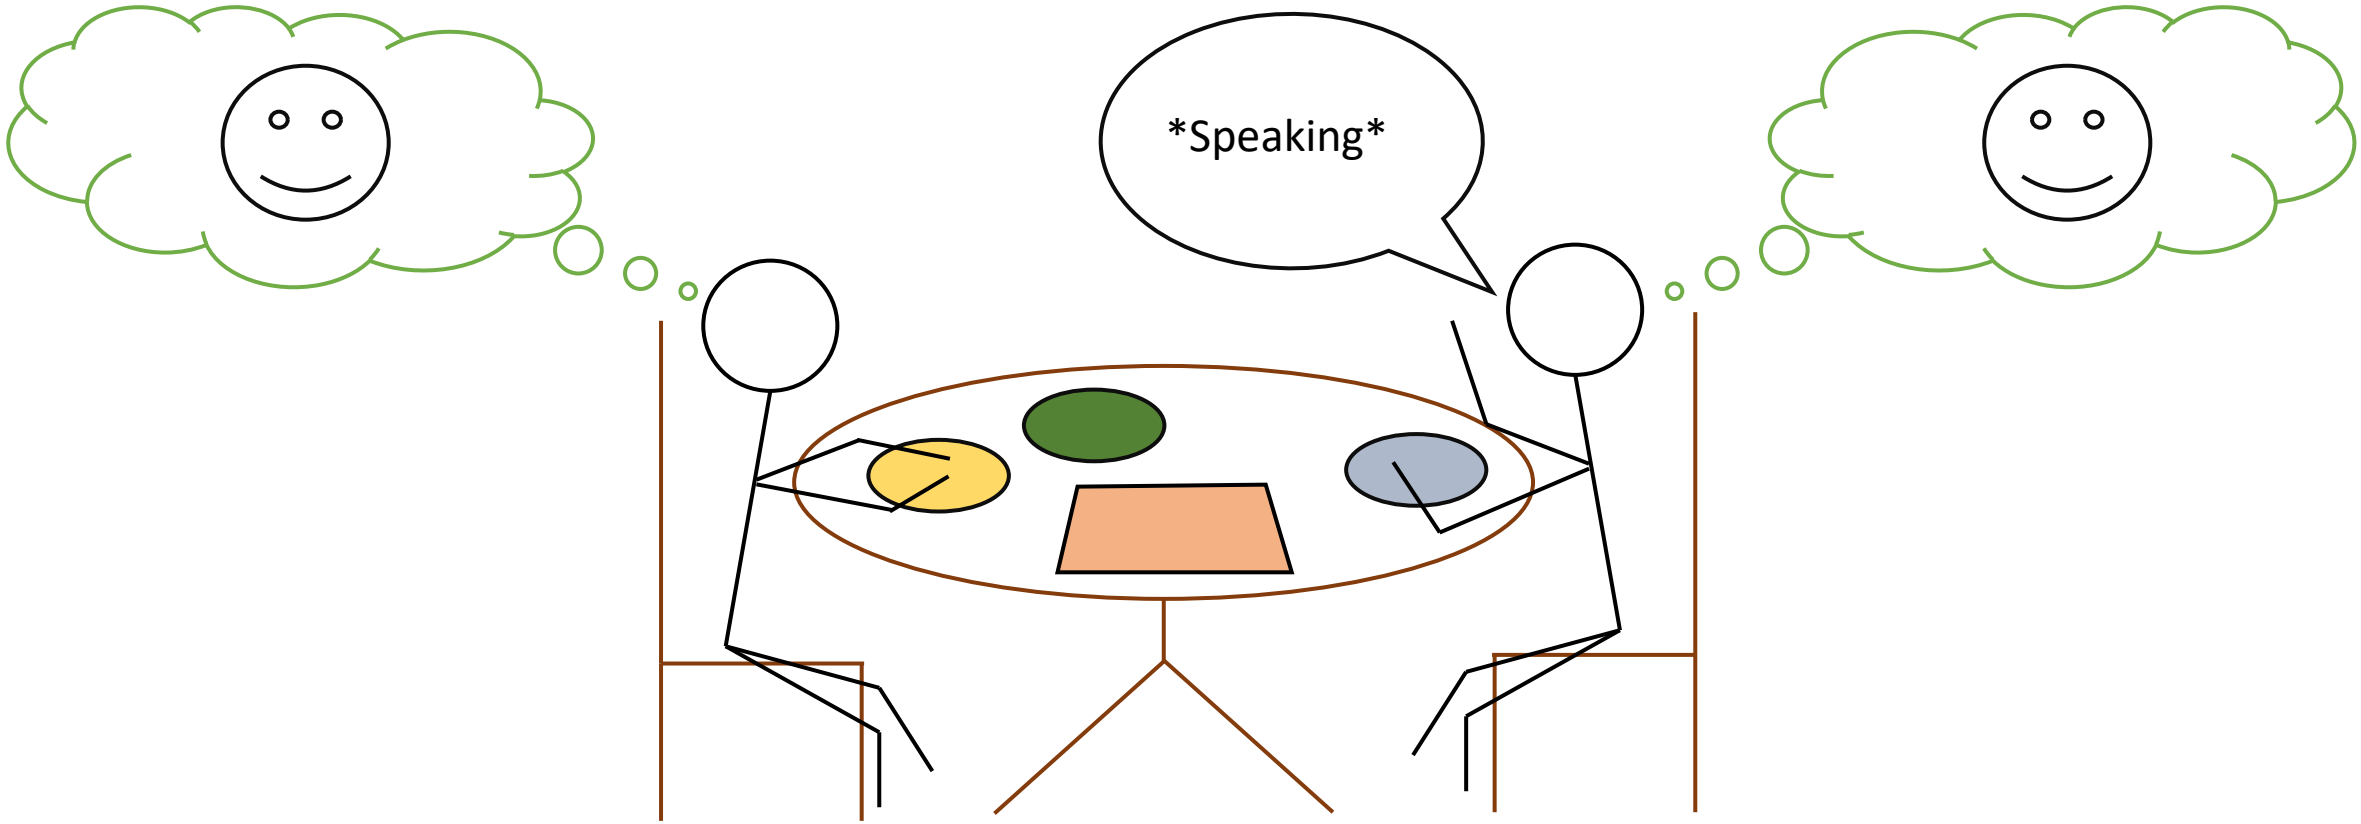
After scrolling through some apps on his phone, he encounters Coronavirus Comfort. He decided to download and examine the app further, because of this, he found some unique features: a GPS, general indication of the safety of the restaurant, the meals served at those specific restaurants, and when they are open or busy.



Jackson message one of his web developer friends about the app; they decided to test it out and arrange a time to meet for dinner at the least busy restaurant that is not too far for either of them.



Upon arriving at the restaurant, they were surprised to see it clean and quiet.



Now they can converse with each other while enjoying a meal in an optimal setting and time frame despite the pandemic is ongoing.

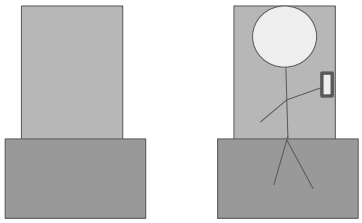
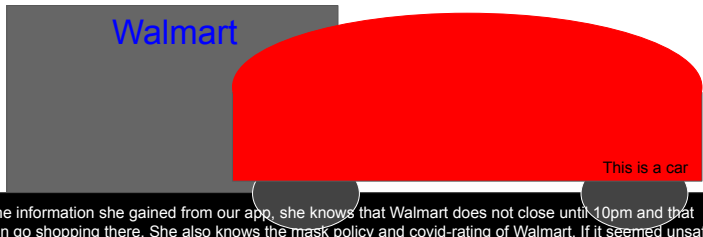
Adriana just finished work but now needs to go shopping for groceries for her family. She prefers to do all her shopping after work to prevent it happening over the weekend. This goal has become significantly harder after the start of covid however.

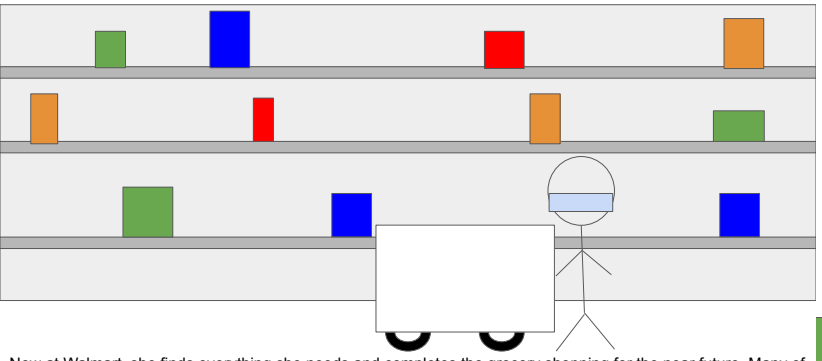


With so many stores hours changing to prevent the spread, Adriana has a problem with arriving to the store past its new closing time. This is very frustrating to her since her since she would like to continue a semi-normal way of life despite covid.

Our app keeps up to date information about covi changes so that Adriana can check the app and find out if stores are open or closed. The app also tells her what items are out of stock, so if she needs this item she knows to go somewhere else.



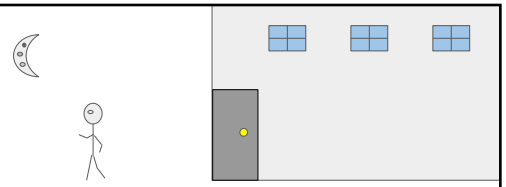
With the information she gained from our app, she knows that Walmart does not close until 10pm and that she can go shopping there. She also knows the mask policy and covid-rating of Walmart. If it seemed unsafe to go, Adriana would go somewhere else since she has a family to think of.



Now at Walmart, she finds everything she needs and completes the grocery shopping for the near future. Many of the items that she needed were out of stock at other locations, but she knew that those items were offered here.

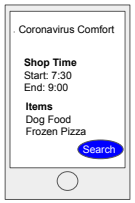
Adriana arrives home unworried about when she is going to get groceries or that she is spreading cvoid to her family members due to the useful information given by our application.

Aaron



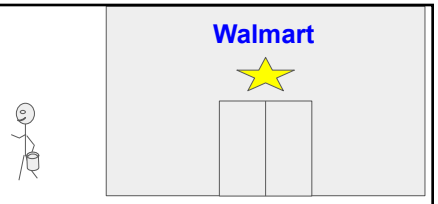
James often gets off of work late in the evening and tries to get home as quickly as possible. He prefers to shop on Friday nights, but finds that since the pandemic started, it is difficult to find stores that are open that carry the items he needs. He would prefer not to change his shopping habits, but is running out of options.

James searches for a solution online and comes across the Coronavirus Comfort, Inc. app. He decides that the app is worth a shot and downloads it.



James enters into the app the items that he wishes to purchase and the timeframe in which he shops, and the app presents him with local options that suit his needs.

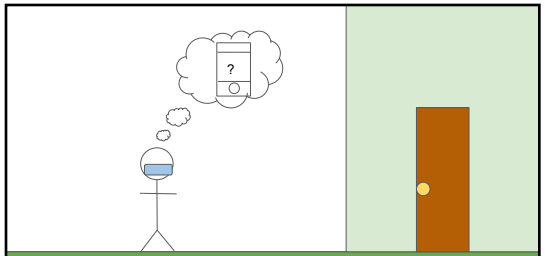
The app displays safety information and rules of entry for the options given, and presents James a link to directions to the facility.



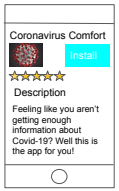
Utilizing the information provided by the app, James is able to obtain the items that he needs without adjusting his schedule.

Now James can get food for himself and fido and still make it home in time to relax with his best friend!

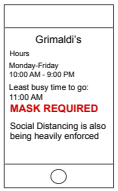
Matthew



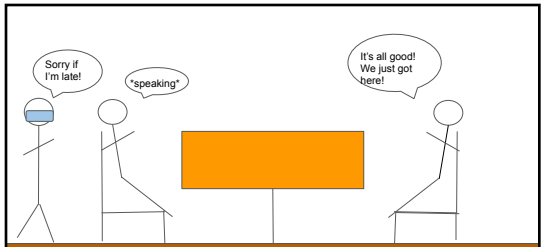
Adam gets off from work every weekday from his marketing job often looking to meet with friends or get some shopping done. It used to be really easy for him before COVID-19, but now it's becoming more and more difficult to find things to do. He wants to find more information about the stores than what shows up on Google.



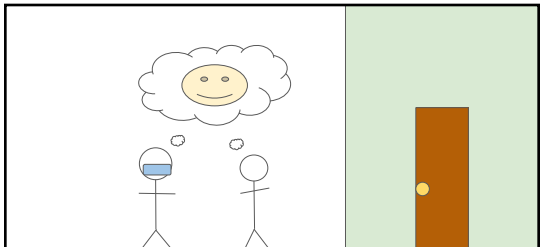
After scrolling through the app store to see if he could find an app that would suit his wants, he finds Coronavirus Comfort. He downloads it and sees if it could help him amongst this pandemic or not.



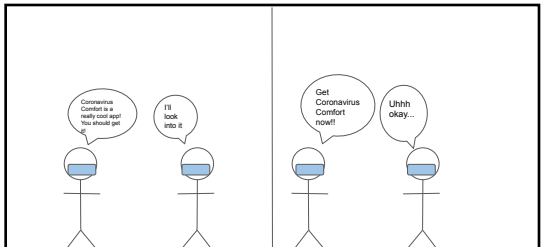
After finding Coronavirus Comfort, he looks through the app. Noticing how he can search up pretty much all of the places around him, even the local ones, and it tells him their accurate hours, what times they are least busy, and what items they are possibly missing if possible.



He decides on one of his days off to meet up with some coworkers at a local restaurant. Everyone wanted the least likely chance to spread Covid, so Adam uses Coronavirus Comfort to find a time that would fit everyone's schedule and would also be the least busy time to grab something to eat.



Adam comes home to see his loving wife who just got finished with her workday. He is not stressed about possibility of giving her COVID



As everyone found that Coronavirus Comfort was really convenient, Adam's coworkers decide to tell the people around them about it so they could use it to their benefit and help stop the spread at the same time.
